Data Definition Language

1. DDL → Data Definition Language
2. This is the language related to Table
3. Applied to Table only means like creating the table/dropping the table/dropping the column(dropping a schema variable)/Altering the Table columns(fields)

1. Create

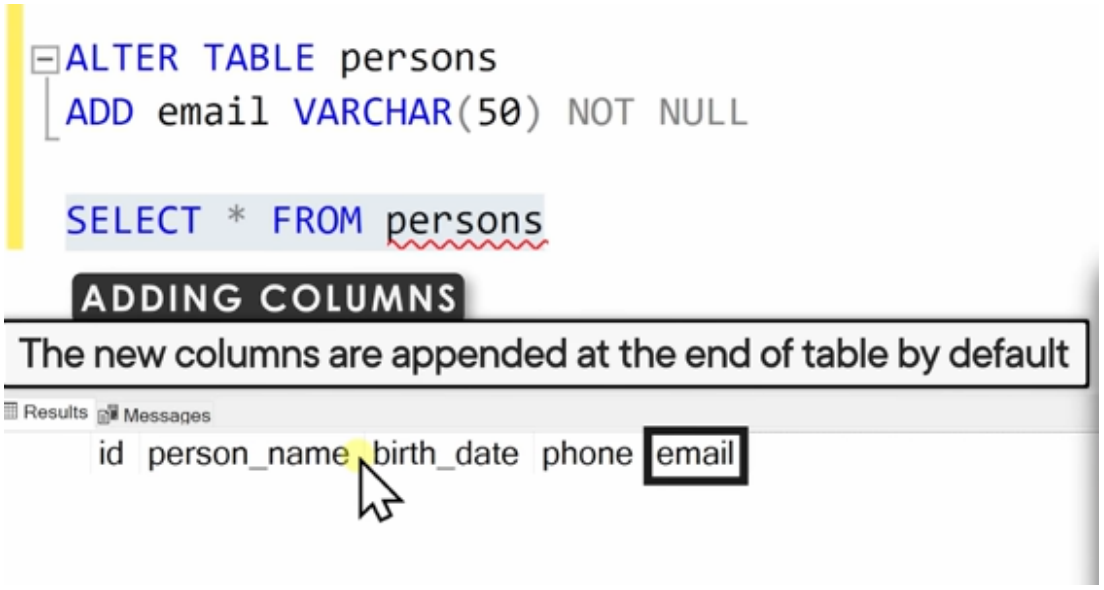

1. used to create a table, by giving the fields name along with their data-types and some other conditions if needed, Mainly the PrimaryKey

```
CREATE TABLE persons (
    id INT NOT NULL,
    person_name VARCHAR(50) NOT NULL,
    birth_date DATE,
    phone VARCHAR(15) NOT NULL,
    CONSTRAINT pk_persons PRIMARY KEY (id)
)
```

2. This is Like creating the Schema,Tables with columns name.
3. Primary Key → it should be some column in the Table which is unique

2. Alter

1. To change the Table → like Inserting,deleting the columns(inserting some field)

2. to insert in middle we ned to drop the table and create again
3. DROP COLUMN phone ⇒ to drop/delete the column

3. Drop

1. This is used to completely delete the table from the database
2. completely means all its column,schema and not identity of that column
