Filtering Data

1. These are very much helpful when Where clause is used

1. Comparision Operators

2. Logical operators

```
SELECT *
FROM customers
WHERE country = 'USA' AND score > 500
```

Results | Messages

id	first_name	country	score
2	John	USA	900

1. Similarly OR→ if either one of the condition is true
2. Where Not score<500 ⇒ give the data where score is ≥500

3. Range

```sql
SELECT *
FROM customers
WHERE score >= 100 AND score <= 500

SELECT *
FROM customers
WHERE score BETWEEN 100 AND 500
```

4. Membership operators

1. In → it retrieves the data where the row sis present in the condition list

```sql
SELECT *
FROM customers
WHERE country = 'Germany' OR country = 'USA'

SELECT *
FROM customers
WHERE country IN ('Germany', 'USA')
```

TIP

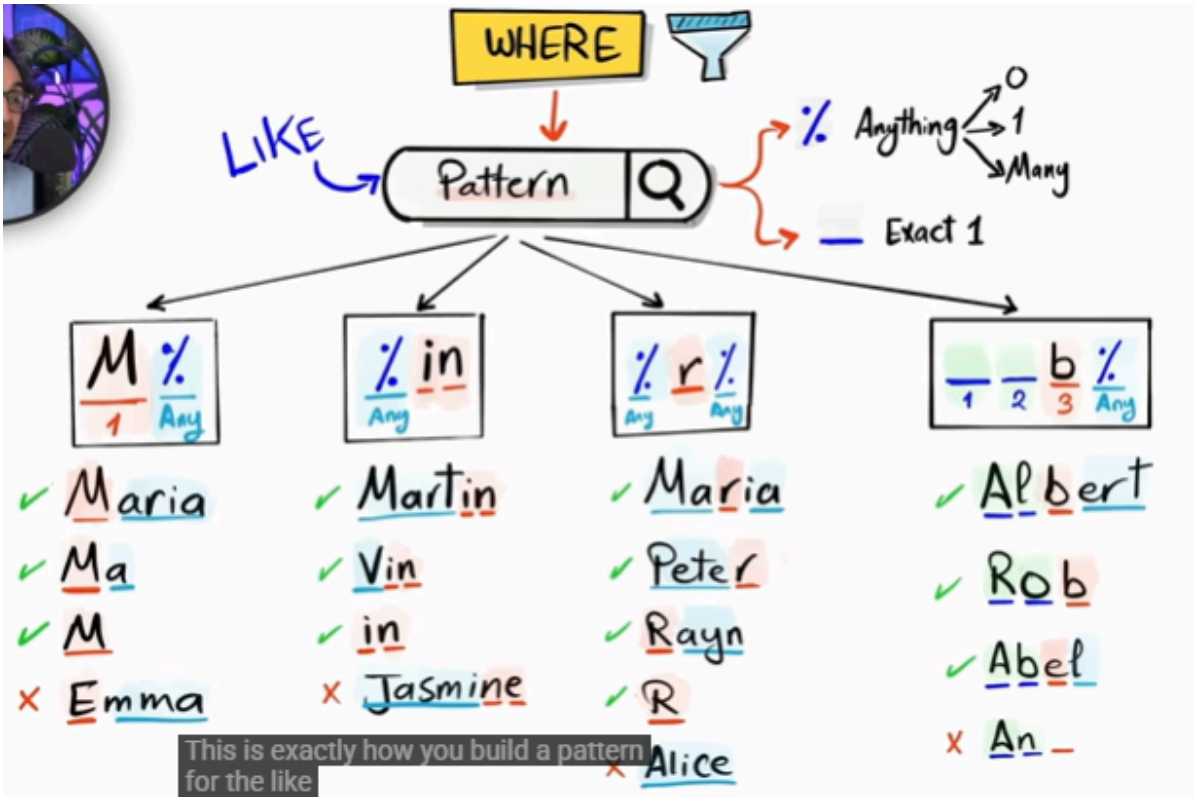

Use IN instead of OR for multiple values in the same column to simplify SQL

USA 900
Germany 500

2. Similarly Not-in

5. Search Operator

1. Helpful to check the character/word present in the strings in column

2. like

```
SELECT *
FROM customers
WHERE first_name LIKE 'M%'
```
